

Week 4 Day 1 assignment:

The screenshot shows the Testleaf API Testcase Generator interface. At the top, it says "Generate reliable API testcases from Swagger". Below this, it says "Upload, validate, generate, review, and export — through one controlled Testleaf-themed workflow." There are three buttons: "AI-powered", "Spec-grounded", and "Postman & Excel export". A progress bar shows four steps: 01 Upload, 02 Validate, 03 Generate, and 04 Export. The main section is titled "STEP 1: Upload Swagger specification" and says "Choose a local Swagger file or provide a Swagger URL to process." There are two radio buttons: "File" and "Link". The "Link" button is selected. Below this, there is a text input field with the URL "https://petstore.swagger.io/v2/swagger.json" and a "Process Swagger" button. A message below the input field says "URL format looks valid. The fetched document will be checked before processing. Supported formats: YAML, YML, or JSON".

Assignment 2:

The screenshot shows the Testleaf API Testcase Generator interface at Step 2: Validated. At the top, it says "Generate reliable API testcases from Swagger". Below this, it says "Upload, validate, generate, review, and export — through one controlled Testleaf-themed workflow." There are three buttons: "AI-powered", "Spec-grounded", and "Postman & Excel export". A progress bar shows four steps: 01 Upload, 02 Validate, 03 Generate, and 04 Export. The main section is titled "STEP 2: Validated" and says "swagger.json". There are three boxes: "OpenAPI 2.0", "Errors 0", and "Warnings 0". A "Valid Specification" button is in the top right. A "Proceed to generate testcases" button is at the bottom right. A message above the main section says "Swagger link processed and validated successfully."

Testleaf API Testcase Generator

AI-powered Spec-grounded Postman & Excel export

11 API testcases generated.
